Research Snapshot (1989-2025)

Keywords: AI, Services,
Sustainability

Current Research
Focus: **Theory** (Neuro-symbolic), **Usability** (Trust Rating, RCTs),
Smart Cities (Energy, Water, Health)

The Space of AI Applications Explored

The Space of AI Techniques Used

Details: <https://sites.google.com/site/biplavsrivastava/>

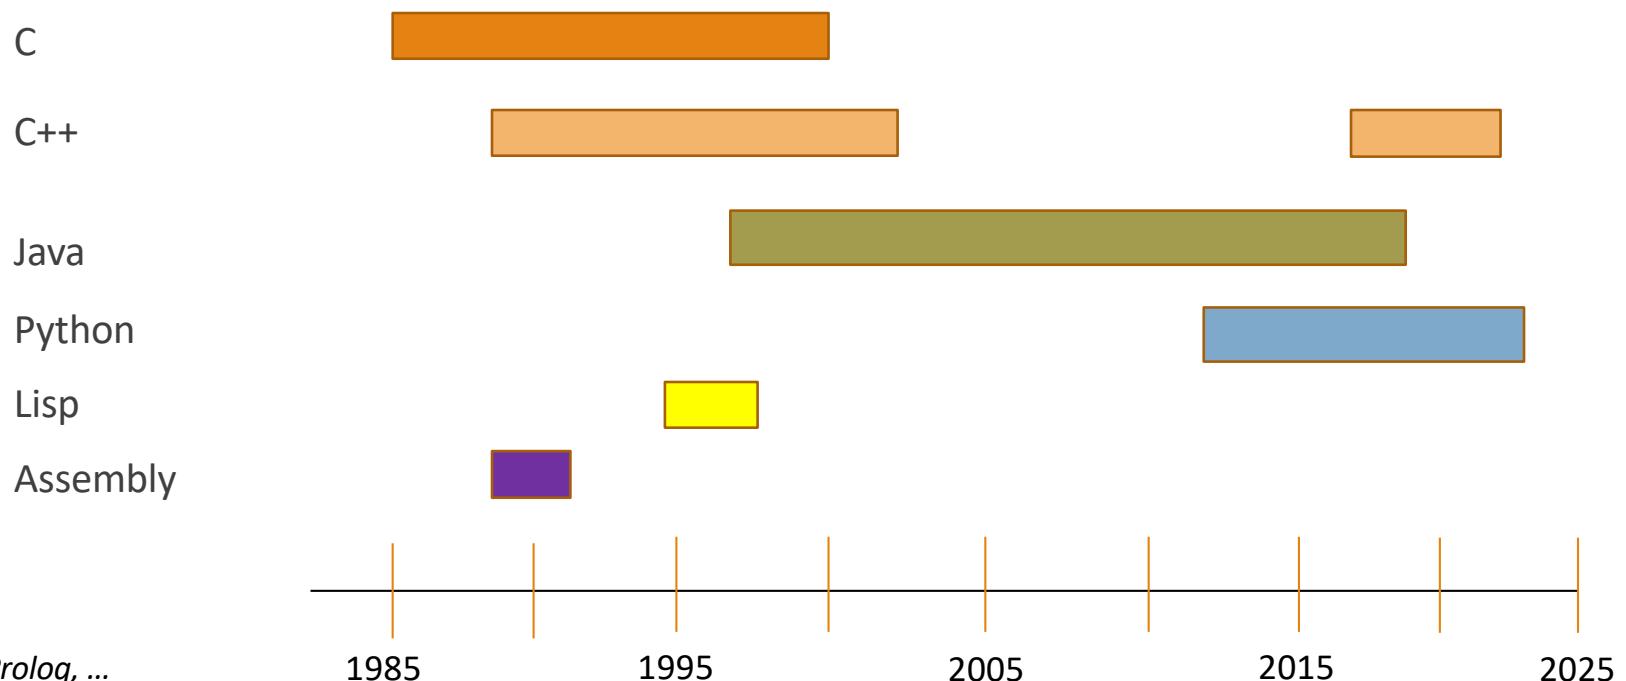

AI4Society Research Group: <https://ai4society.github.io/projects/>

Keywords: AI, Services, Sustainability

Papers: 250+ refereed; 7,200+ references

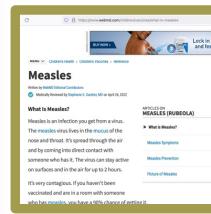

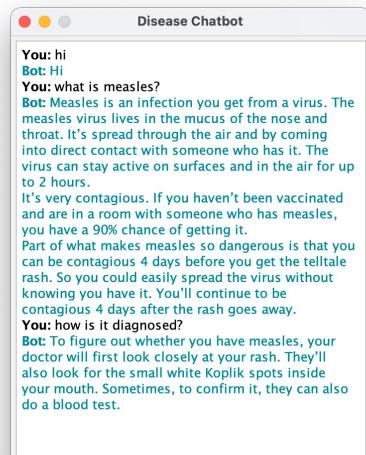

Patents: 77 (US issued); 4 sole inventions

Personal Programming Language Journey* (35+ years)

Develop a Vibrant Research Culture Around AI

Students building chatbots
in Adv. Prog. Tech. class
in C++, Java and Python
(Elected Reps, Spring 2022;
Diseases, Spring 2023; Finance,
Spring 2024)

WebMD

System Image Credit:

Christine Steege, CSCE240(H), Spring 2023

Classes offered:

Trusted AI (CSCE 581) / AI (CSCE 580) , Adv. Prog. Tech. (CSCE 240),
Comp. Proc. of Nat. Lang./NLP (CSCE 771)
Special Topics – Open Data, Planning, Chatbots

AI/ Chatbots built for: governance (IJCAI 2016, AI Magazine 2024), astronomy (AAAI 2018 best demo award), water (AAAI 2018), smart room (ICAPS 2018 demo runner up, IJCAI 2018), career planning (commercial product), market intelligence (AAAI 2020 deployed AI award), dialogs for information retrieval (ICAPS 2021), fairness assessment (AAAI 2021), computer games (AAAI 2022), generalized planning (IJCAI 2024), information spread in opinion networks (AAAI 2024 best demo award), transportation, set recommendation (teaming (AAAI 2024 deployed AI award), meals) and health.

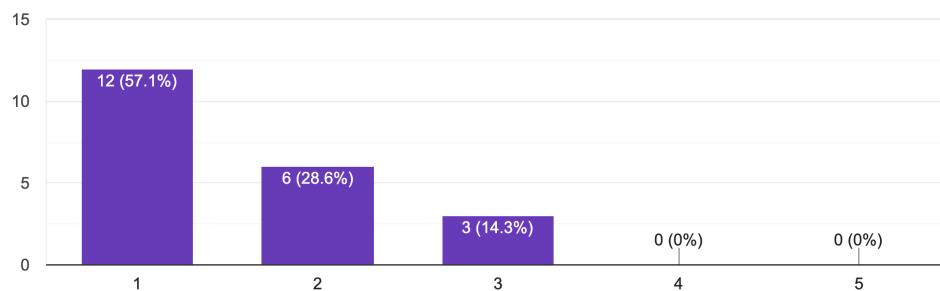

<https://ai4society.github.io/demos/>

Expectations Survey

- 21/49 = 43% response rate as of 1pm today.
- AI background (1-5 scale):

How well is your background in AI (5 highest)? If this is your first course (e.g., not taken CSCE 580, 581, Machine Learning, Pattern Recognition before), please enter between 1-2.

21 responses

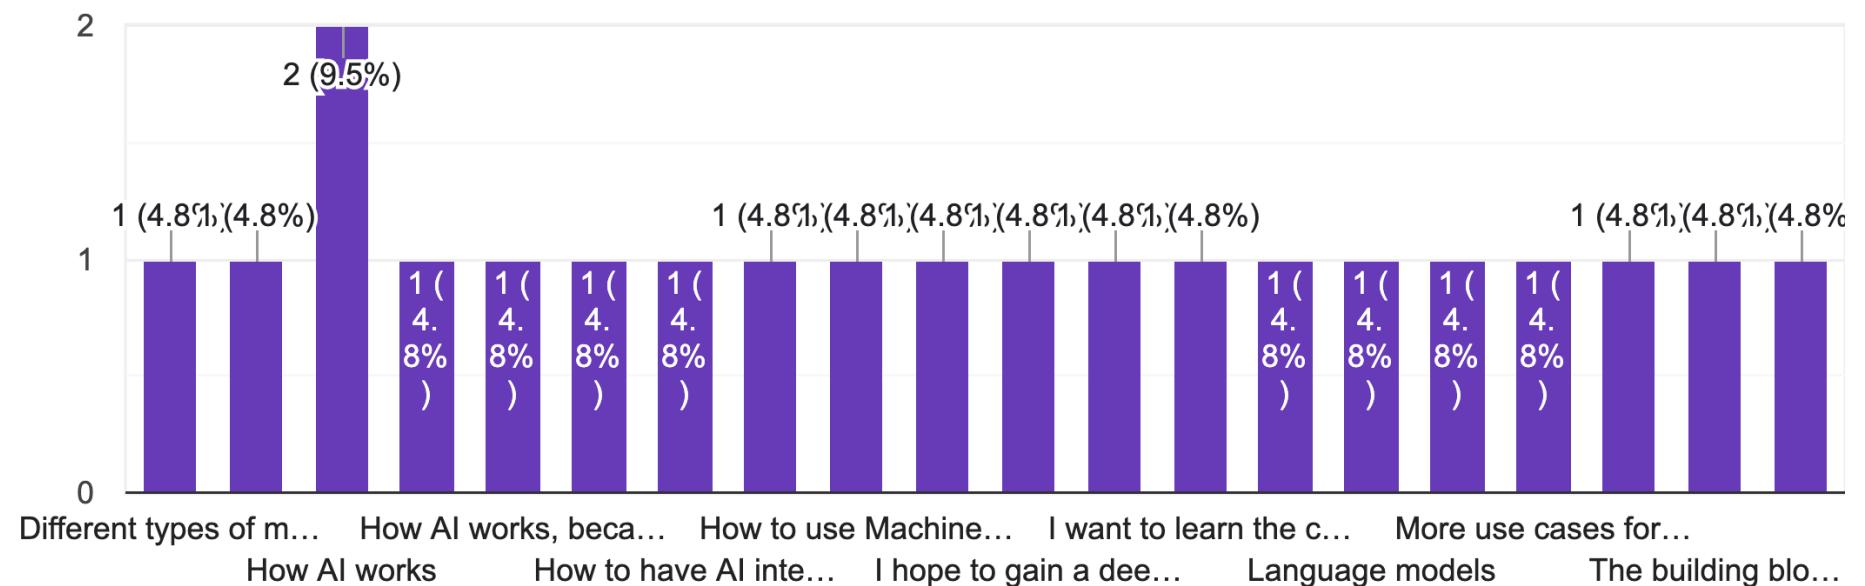

Other topics

- How to use it in a work setting
- Decision making
- A few other AI problems that might be beneficial to cover are questions about **how trustworthy AI is, including ethics, legal and security concerns**.
- **Unsupervised AI Learning**
- vision
- Computer vision
- Optimization sounds interesting, like how does it determine the most optimal solution
- I think that's pretty much what I was interested in for the most part.
- None in particular, though **decision making under uncertainty** sounds interesting
- **Computer vision, heuristic algorithms, autonomous systems**
- I am fairly new to A.I., so I am open to all applications of A.I..
- LLM's and decision making are two of the main ones I'm interested in, alongside the AI of games. My only other main interest is in **image recognition and recreation**.
- Optimization techniques, how they apply to AI
- **AI Self-Development**
- Computer vision and identification
- **Optimization**
- I would like to cover how AI optimizes a persons work and how that will effect people moving forward with more AI in the future.
- **real world applications**

Expectations Survey

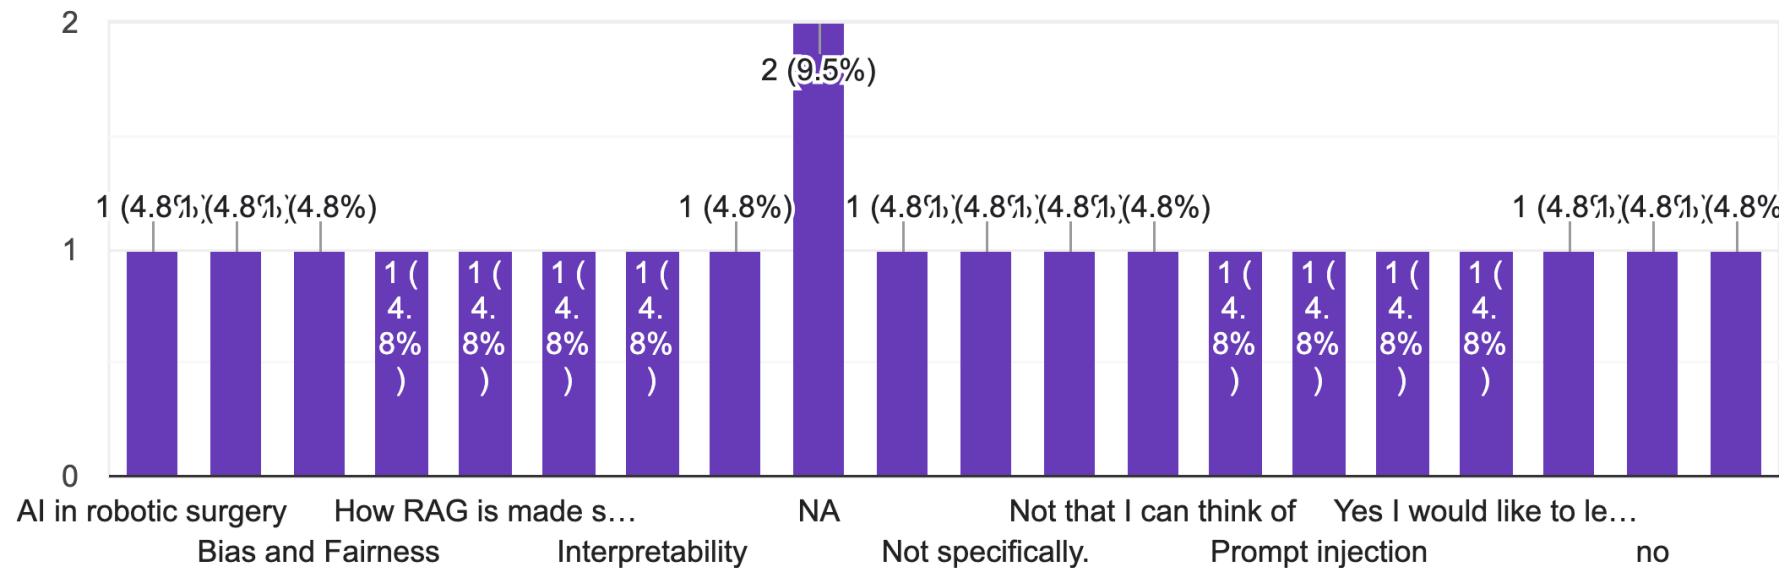

What is the one main thing you want to learn from the class ?

21 responses

Expectations Survey

We may touch upon some AI trustworthiness topics: e.g., explanations, fairness (lack of bias), testing and rating; and in the domains of traffic, ele...ific trust topics or domains you like us to consider?
21 responses

Main Section

AI: A Quick Introduction

Concept: AI

Example: Taking Care of a Baby Individual's Extension

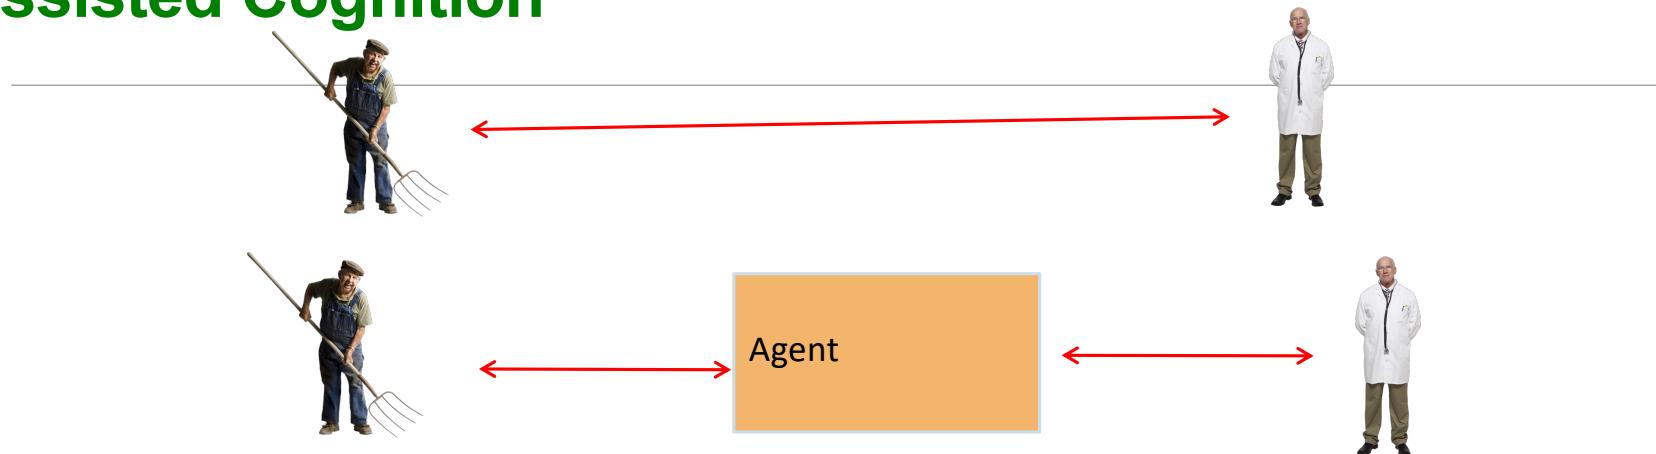

Expected behavior:

- Inform
 - Alert when crying
 - Alert when awake
 - Alert when idle
- Do
 - Raise temperature of room
 - Play music
 - ...

Conditions can be

- input and reasoned (e.g. rule-based methods) OR
- learned (from data)

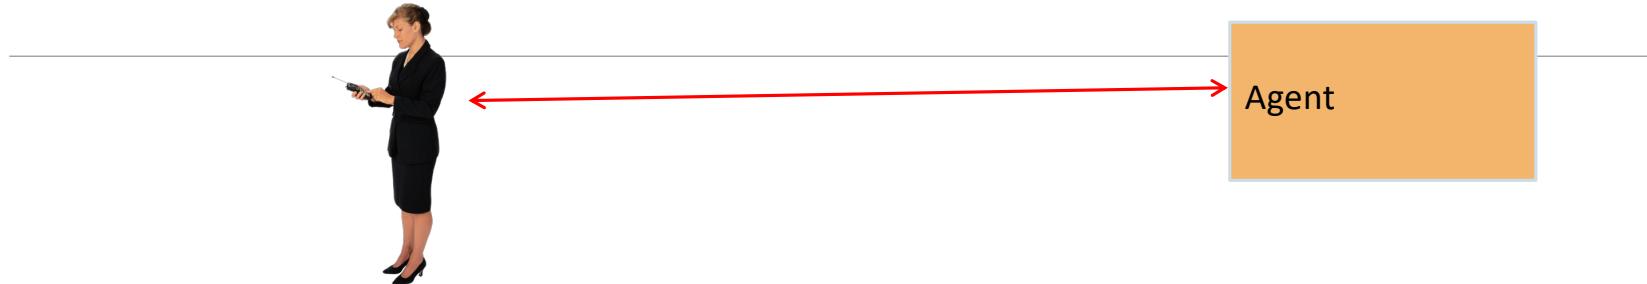

Example: Taking Care of a Senior **Assisted Cognition**

Expected behavior:

- Inform
 - Alert when idle
 - Alert when away from known locations
 - Alert when checkup/ medicines due
- Do
 - Send body parameters periodically
 - ...

Example: Taking Care of Oneself **Personal Digital Assistants**

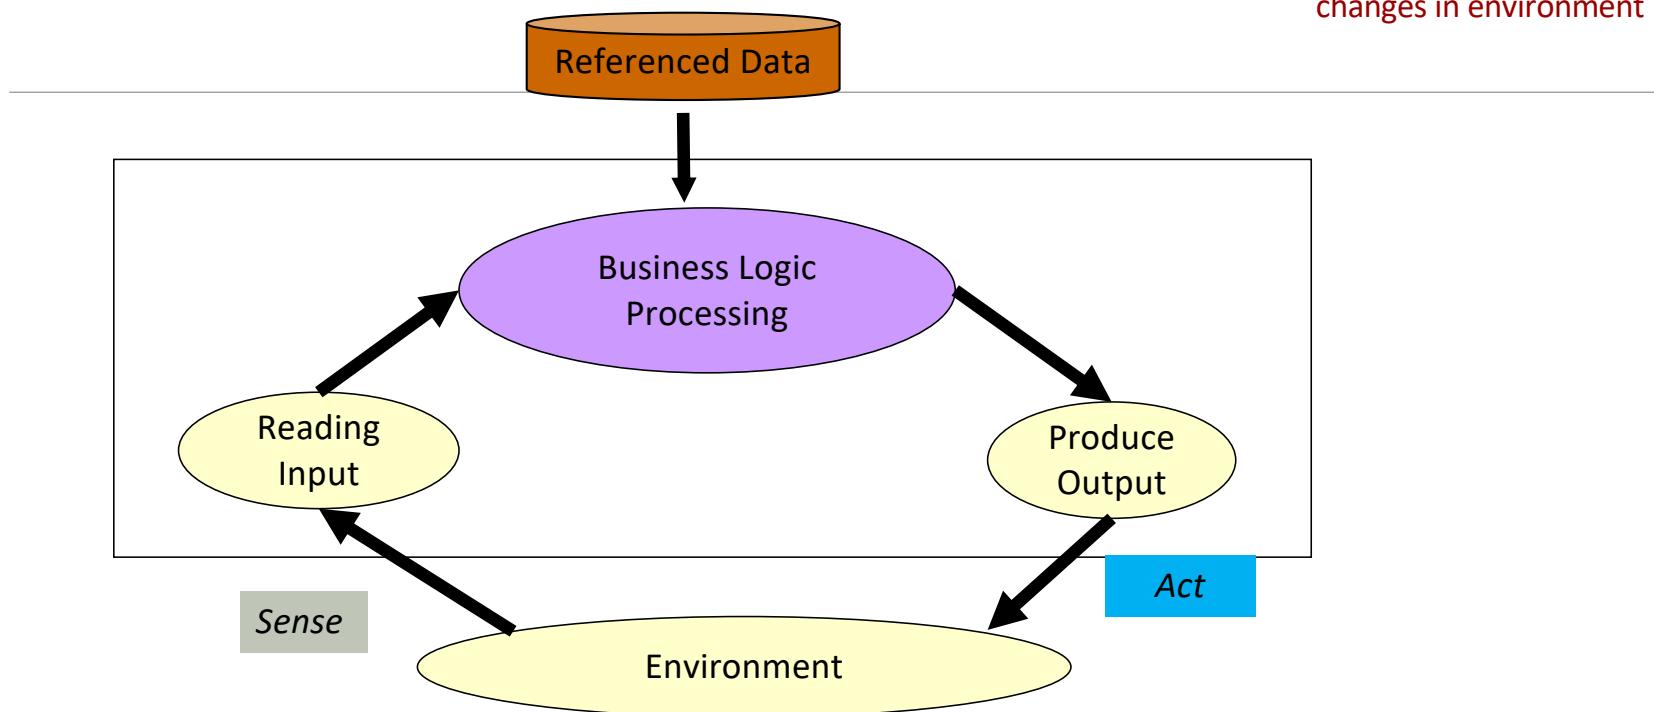

Expected behavior:

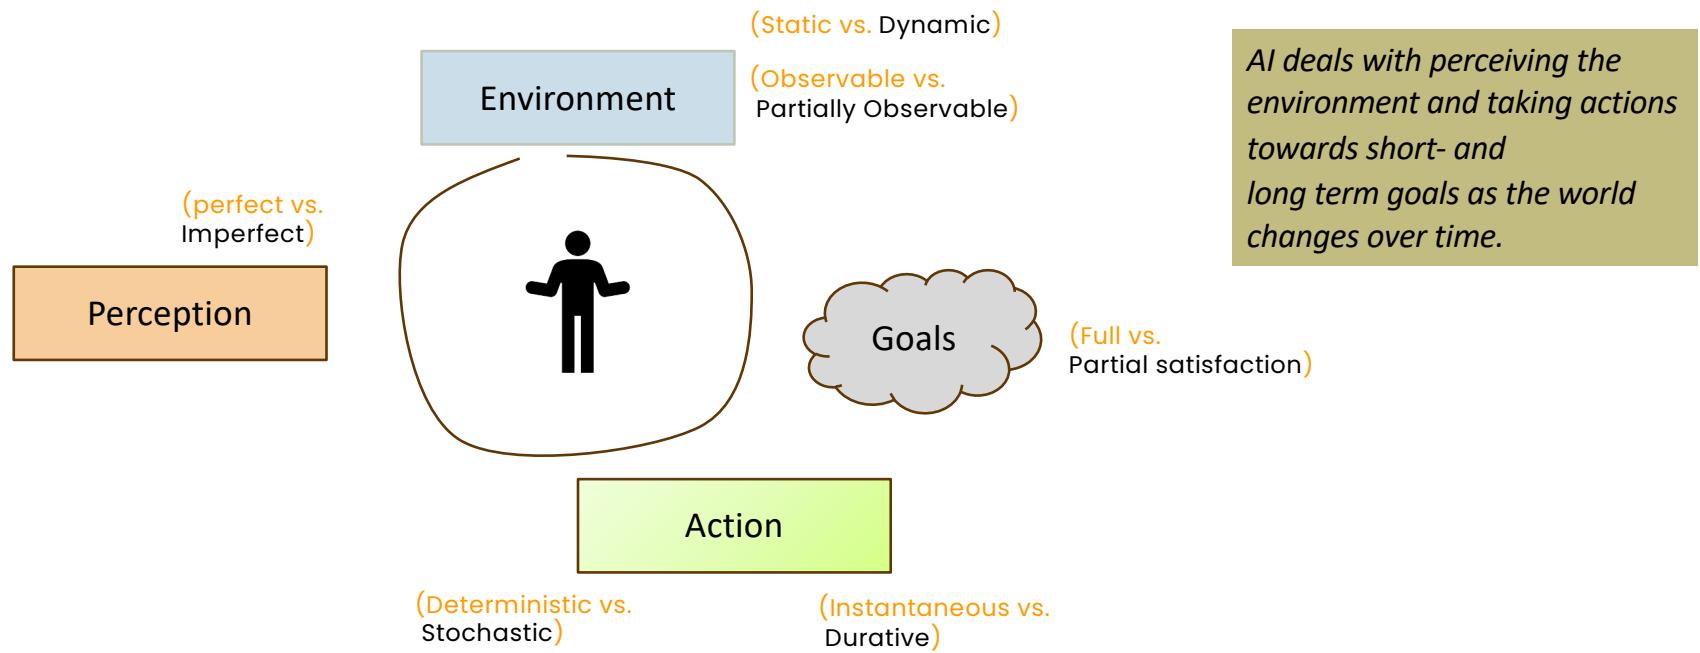

- Inform
 - When missing meetings
 - When missing social commitments
 - Reminding of priorities
 - ...
- Do
 - Make all cancellations / re-bookings when schedule changes
 - Find alternatives to current decisions and give choices (e.g., traffic)
 - ...

AI => Adaptive/ Intelligent Software System

- Business Logic Moves to Declarative Data (policy)
- Software is more resilient to changes in environment

Artificial Intelligence (AI) as an Agent

Example 1: Courses for a Student

- Decision: Student deciding which courses to take for their program
- Data
 - **Public:** About courses
 - **Public:** About faculties
 - **Public:** About job opportunities
 - **Public:** About research opportunities and industry trends
 - **Private:** what the student wants to do
- Analysis
 - Courses offered in different semesters
 - Teachers offering courses – background, hardness of classes, ...

Trust

- Are the insights reliable?
- Do they cause short- or long-term harm?
- Will users adopt the insights?

Thought Exercise – (AI) Class and a Hypothetical AI-based Advisor

- **Good** decisions for students

- Get good grades, marks
- Learn
- ...

- AI-may suggest

- Give teacher rating
- *But what about learning?*

- **Good** decisions for instructor

- Get good rating
- Finish course
- Teach long-term skills
- ...

- AI-may suggest

- Give student grades
- *But what about teaching?*

Trust

- Are the insights reliable?
- Do they cause short- or long-term harm?
- Will users adopt the insights?

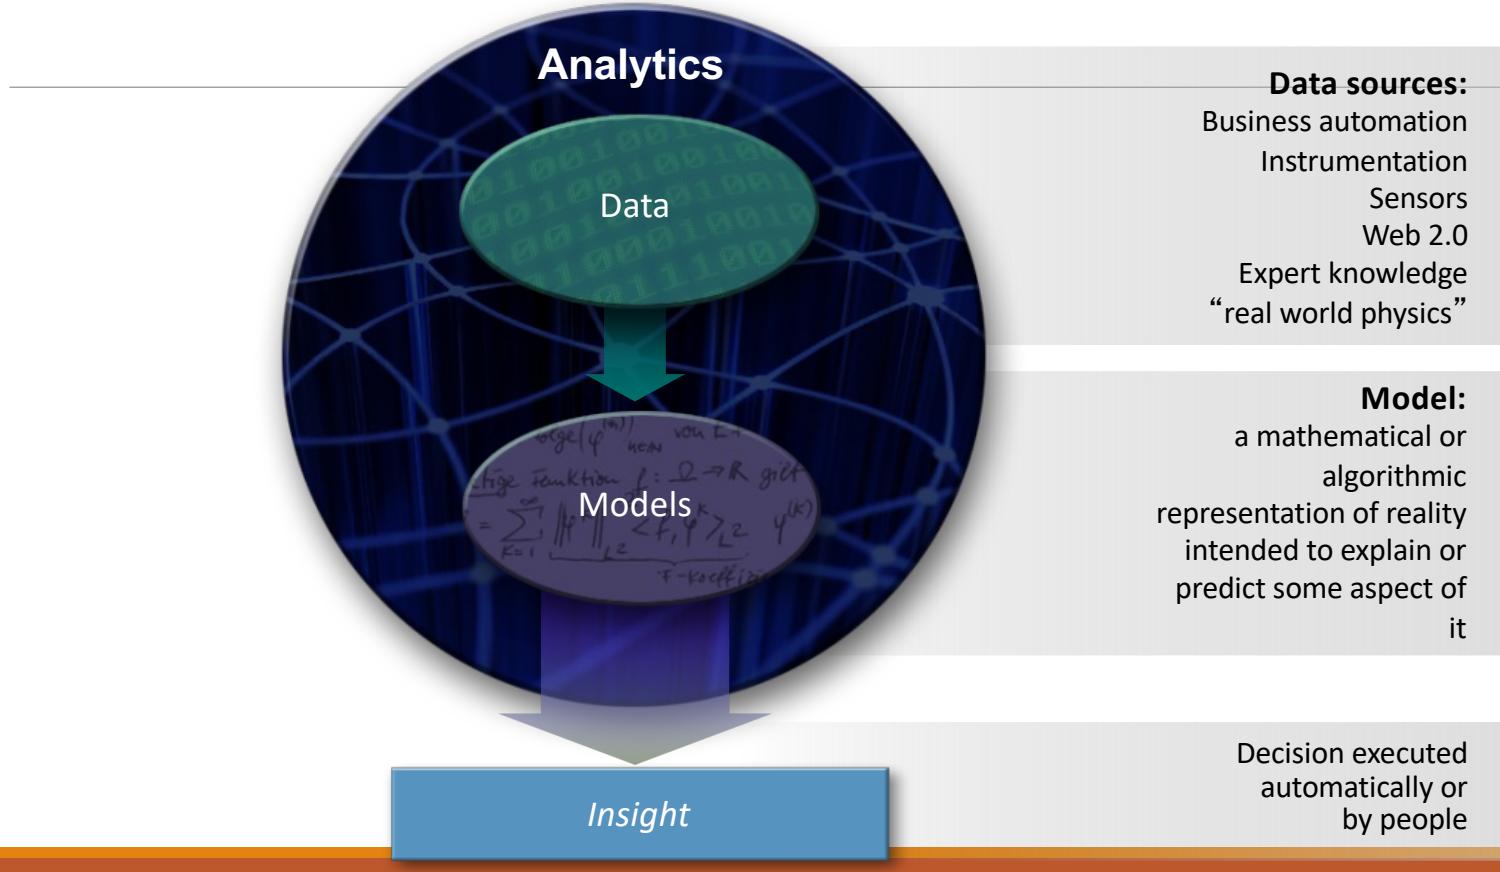

Example 2: Health During a Pandemic

- Decision: Individual staying healthy during a pandemic like COVID19
- Data
 - **Public:** About disease, cases, deaths, variants
 - **Public:** About mitigation steps: e.g., mask wearing restrictions and practices, lockdowns, hospital conditions
 - **Private:** pre-existing health conditions
- Analysis
 - Regions with high and low cases
 - Whether to eat inside a restaurant?
 - How to make an urgent road trip ?
 - How to hold classes at a University?

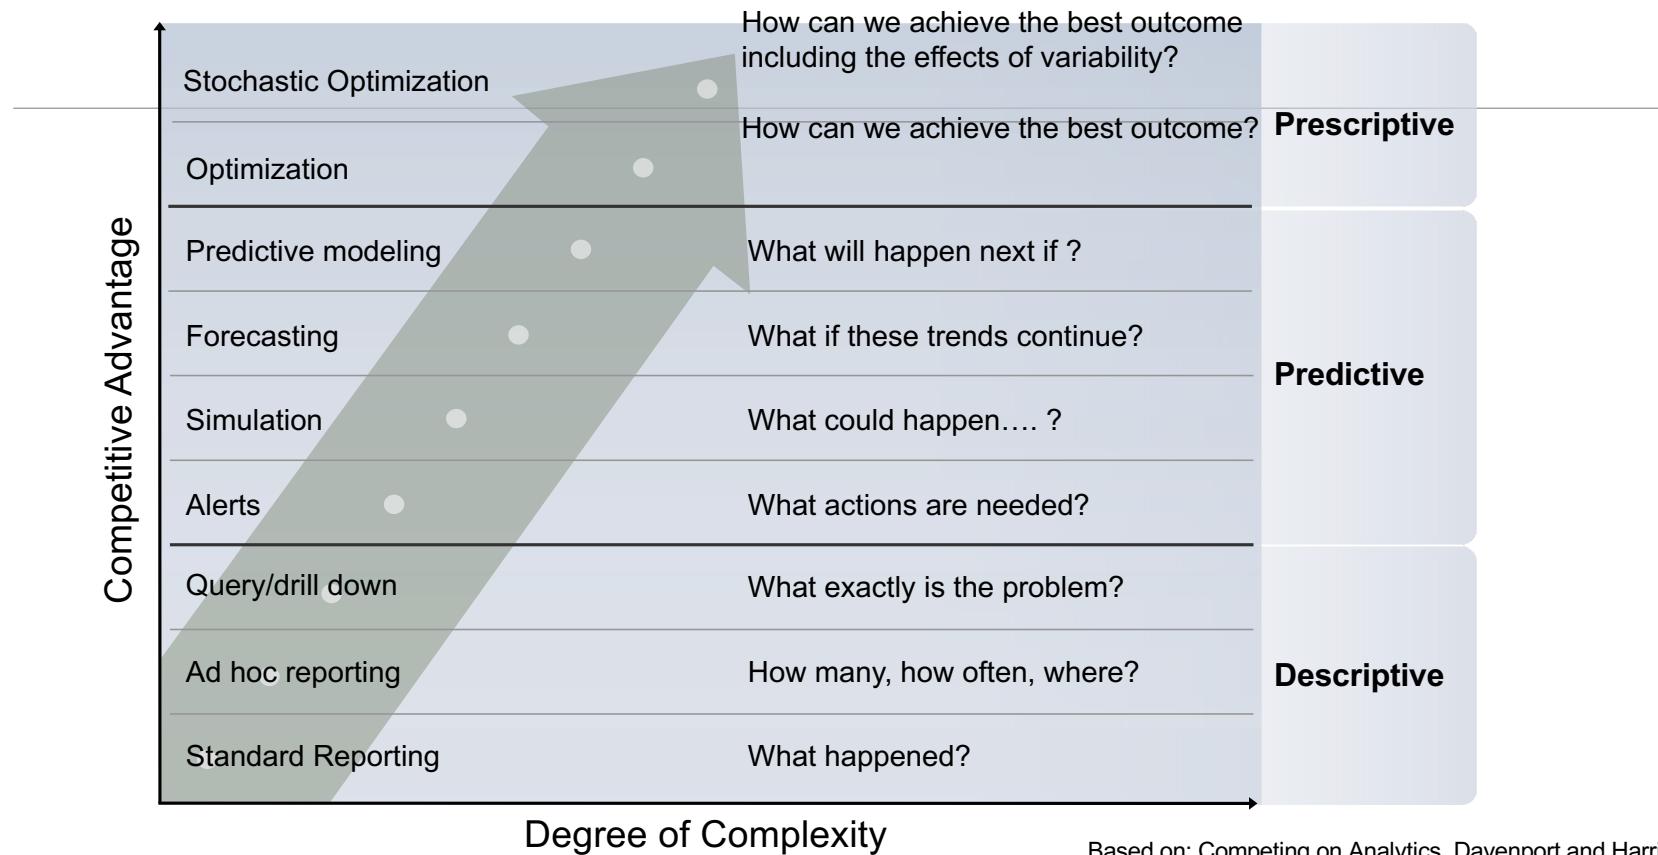

Trust

- Are the insights reliable?
- Do they cause short- or long-term harm?
- Will users adopt the insights?

Advanced AI Techniques (**Analytics**) like Reasoning (**Symbolic**) & Machine Learning (**Neural**)
make use of data and models to provide insight to guide decisions

Analytics Landscape

Based on: Competing on Analytics, Davenport and Harris, 2007

History of Chatbots is the History of AI

1950 - Turing test

"which player – A or B – is a computer and which is a human."

1964-66 – Eliza

computerized Rogerian psychotherapist

2011 – IBM Watson

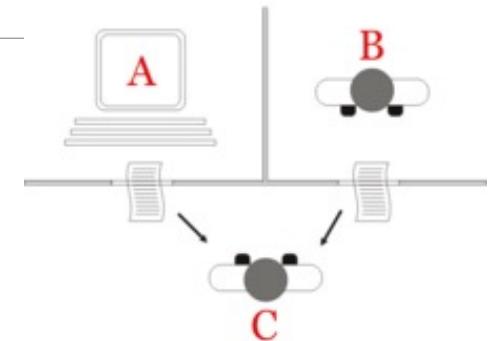

question answering in a game setting

2022 – ChatGPT

large language model based generative, general, chat interfaces

* 2025: GPT-4.5 claimed to have passed Turing test

Today everywhere – Amazon Alexa, Google Echo, Apple Siri, ...

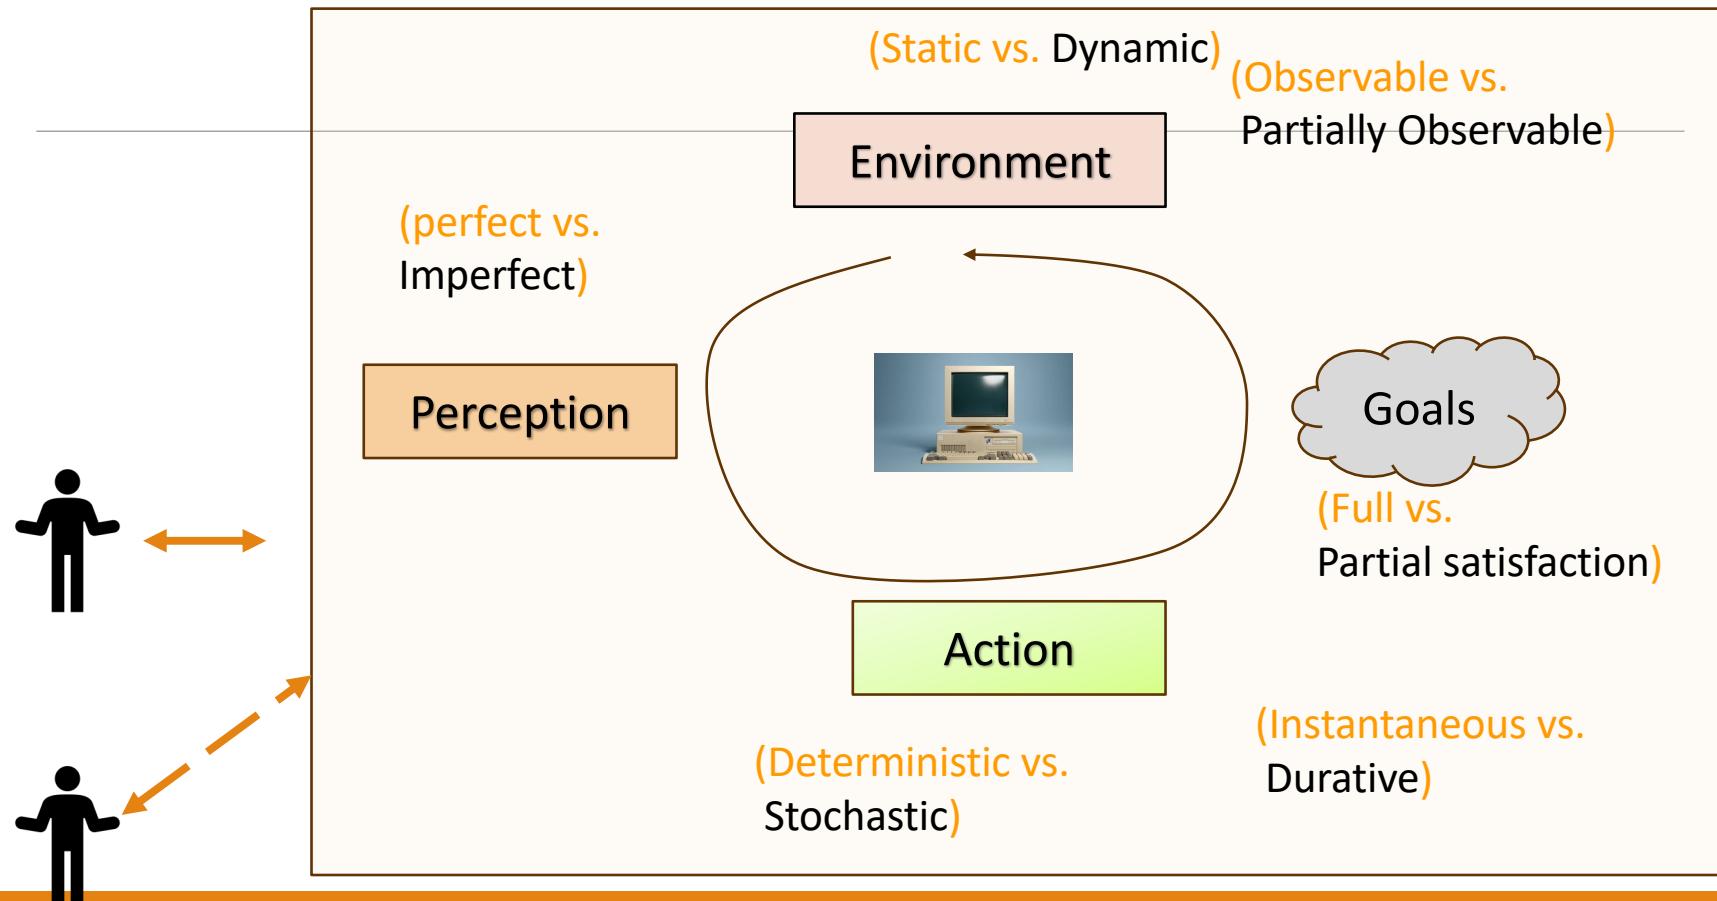

Credit: https://en.wikipedia.org/wiki/Turing_test

Human-AI Collaboration

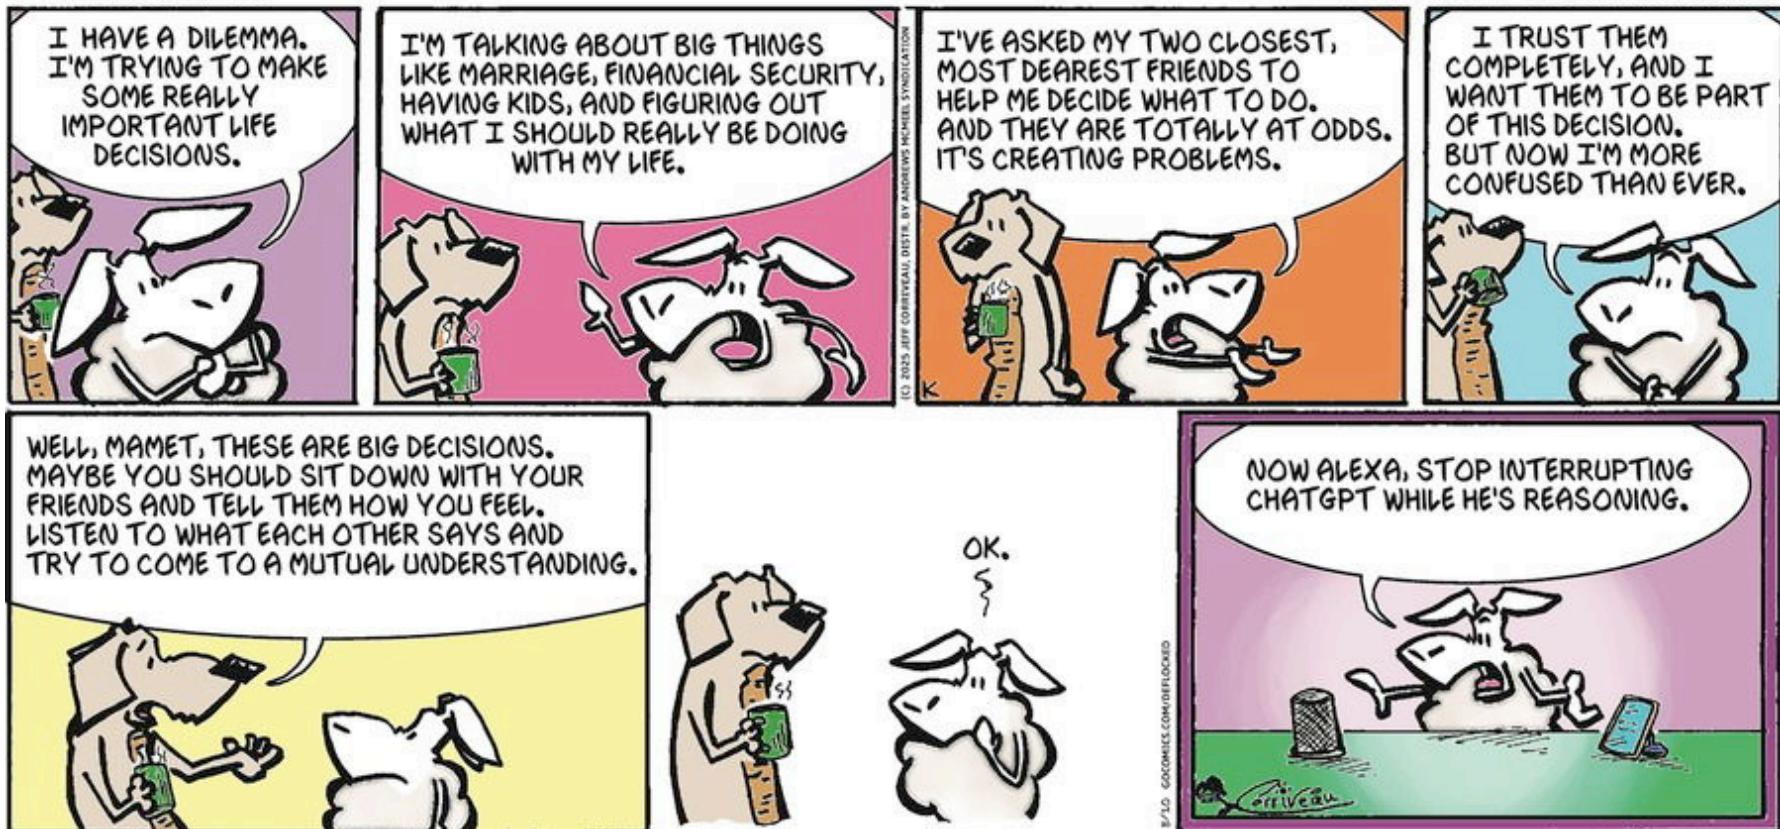

Relationship Between Main Major AI Topics

DEFLOCKED

BY JEFF CORRIVEAU

Course Logistics

Course Description

CSCE 580 - Artificial Intelligence (3 Credits)

Heuristic problem solving, theorem proving, and knowledge representation, including the use of appropriate programming languages and tools.

Prerequisites: [CSCE 350](#).

Learning Objectives

Understand the breadth of AI techniques, be empowered to solve real-world challenges

- L1: Appreciate and work with diversity of data—text, speech and visual; focus of course will, be structured data (e.g., tables) and text (NLP; English)
- L2: Learn techniques to derive insights from data spanning reasoning (e.g., symbolic) and learning (e.g., neural) in a decision-making setup
- L3: Learn methods to represent and organize insights
- L4: Make insights usable with people in a collaborative setting (“chatbots”)
- L5: Understand issues related to usage of AI methods/ tools with people.
- L6: Gain experience by build a real-work AI

Course Description – Spring 2025

2026 Likely ()*

CSCE 581 - Trusted Artificial Intelligence (3 Credits)

AI Trust – responsible/ethical technology, fairness/ lack of bias, explanations (XAI), machine learning, reasoning, software testing, data quality and provenance, tools and projects.

Prerequisites: C or better in [CSCE 240](#) and [CSCE 350](#).

Prerequisite or Corequisite: D or better in [CSCE 330](#).

Focus of This Course & Relationship With Recent Others

CSCE 580 – Introduction to AI – Topics in Recent Courses

- Topic 1: Introduction, aims
- Topic 2: Search, Heuristics
- Topic 3: Constraint Satisfaction Problems
- Topic 4: Decision making - Game trees
- Topic 5: Decision making - Decision networks
- Topic 6: Decision making – Markov Decision Processes, Hidden Markov models
 - Topic 7: Learning – naïve Bayes, regression, Classification, clustering (unsupervised)
 - Topic 8: Learning neural network, deep learning
 - Topic 9: Decision making – Planning, Reinforcement Learning
 - Topic 10: Robotics
 - Topic 12: Representation, Ontology
 - Topic 12: Tools

Classical AI topics and a focus on implementation

Fall 2024

CSCE 581 – Special Topic; Regular Planned

- Week 1: Introduction
- Week 2: Background: AI - Common Methods
- Week 3: The Trust Problem
- Week 4: Machine Learning (Structured data) - Classification
- Week 5: Machine Learning (Structured data) - Classification – Trust Issues
 - Week 6: Machine Learning (Structured data) – Classification – Mitigation Methods
 - Week 7: Machine Learning (Structured data) – Classification – Explanation Methods
 - Week 8: Machine Learning (Text data) - Classification
 - Week 9: Machine Learning (Text data) - Classification – Trust Issues
 - Week 10: Machine Learning (Text data) – Classification – Mitigation Methods
 - Week 11: Machine Learning (Text data) – Classification – Explanation Methods
 - Week 12: Emerging Standards and Laws
 - Week 13: Project presentations
 - Week 14: Project presentations, Conclusion

AI/ ML topics and with a focus on fairness, explanation, Data privacy, reliability

Spring 2025

Adapt Based on Class Interest?

- CSCE 580: Classical AI topics and a focus on implementation
- CSCE 581: AI/ ML topics and with a focus on fairness, explanation, Data privacy, reliability
- Need to adapt?
 - AI/ ML topics with a focus on generative AI, fairness, explanation, adversarial attacks; building chatbots
 - Help students focus on their elected course project

High Level Plan

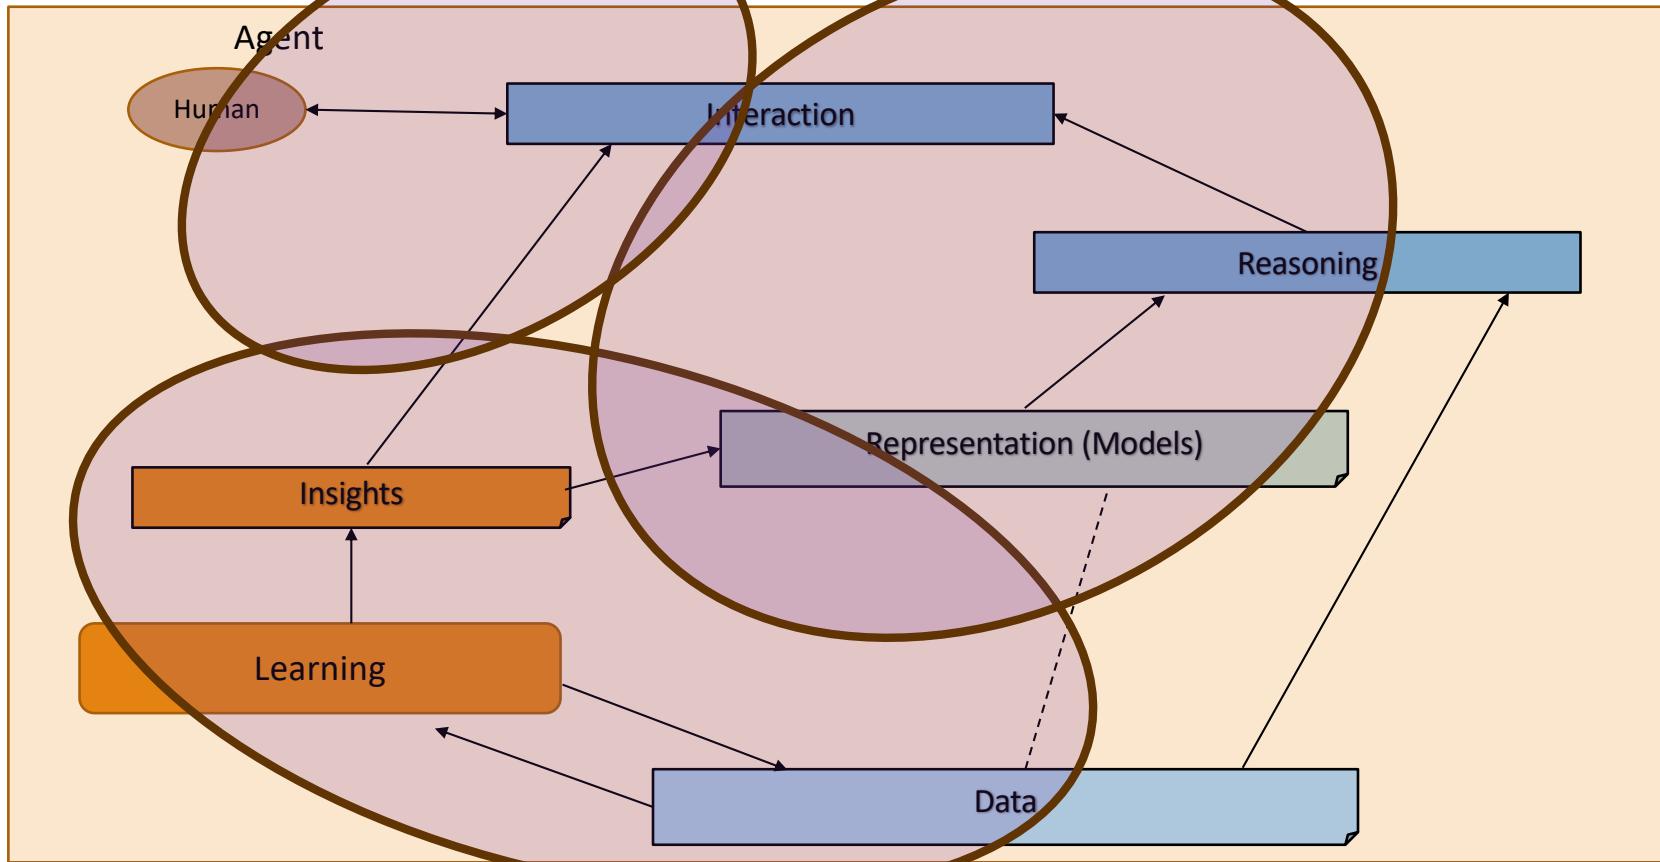

CSCE 580 –

- Week 1: Introduction, Aim: Chatbot / Intelligence Agent
- Weeks 2-3: Data: Formats, Representation and the Trust Problem
- Week 3: Machine Learning – Supervised (Classification)
- Week 4: Machine Learning - Unsupervised (Clustering) –
- Topic 5: Learning neural network, deep learning, Adversarial attacks
- Week 6: Large Language Models – Representation and Usage issues
- Weeks 7-8: Search, Heuristics - Decision Making
- Week 9: Constraints, Optimization – Decision Making
- Topic 10: Markov Decision Processes, Hidden Markov models - Decision making
- Topic 11-12: Planning, Reinforcement Learning – Sequential decision making
- Week 13: Trustworthy Decision Making: Explanation, AI testing
- Week 14: AI for Real World: Tools, Emerging Standards and Laws;
Safe AI/ Chatbots

Fall 2025

AI/ ML topics and with a focus on showing breadth of classic methods, introducing language models and trustworthiness issues (testing, fairness, explanation, data privacy, reliability), and experience in real-world system building

Relationship Between Main AI Topics (Covered in Course)

Student Assessment

- A = [920-1000]
- B+ = [870-919]
- B = [820-869]
- C+ = [770-819]
- C = [720-769]
- D+ = [670-719]
- D = [600-669]
- F = [0-599]

Tests	Undergrad	Grad
Course Projects – report, in-class presentation*	600	600
Quiz – 2 best from 3 (undergrad only)	200	200
Final Exam **	200	100
Additional Final Exam – Paper summary, in-class presentation		100
Total	1000 points	1000 points

* Details to follow.

** May be be takeaway

Course Projects

- Project A – 4 weeks [200 points]
 - Model AI Assignments: <http://modelai.gettysburg.edu/>
 - Choose a project; preferably within last 5 years (i.e., after 2020); follow instructions and do it alone
- Project B – 8 weeks [400 points]
 - Option 1 – do a common problem given to the class; instructions to follow; will have strong generative AI and trust component
 - Option 2 – do your own, under consultation with instructor

Taking Graduate Credits – Additional Requirements

- a) All three quizzes are mandatory. (No 2/3 option available)
- b) Research paper presentation and report had to be done.

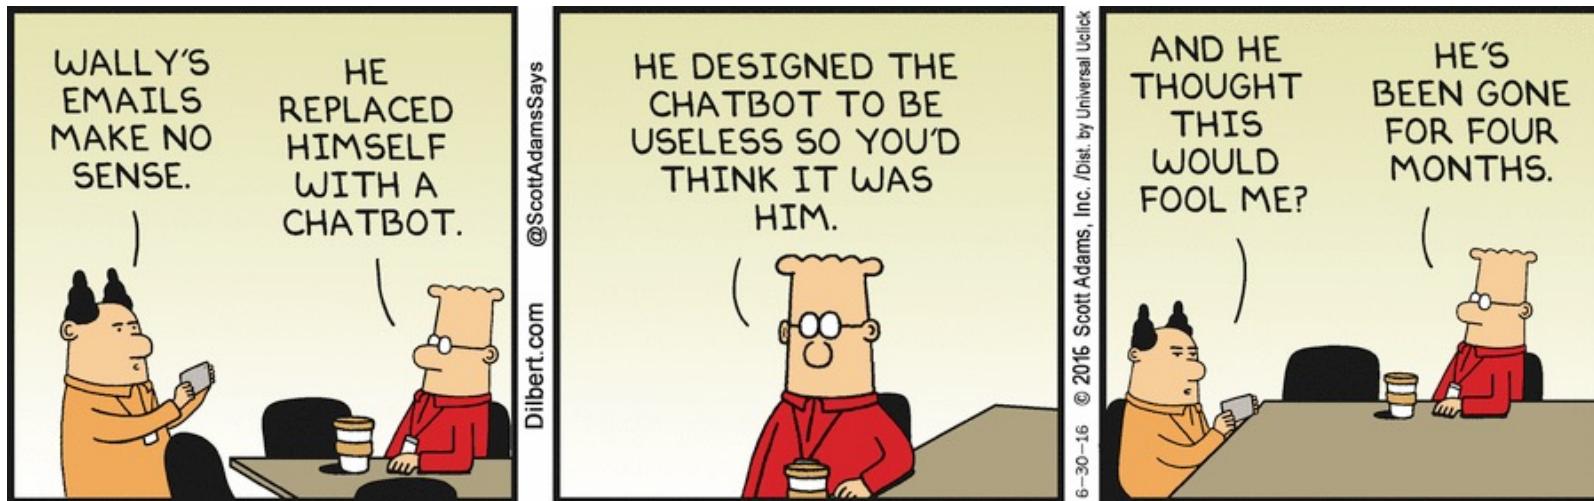

Class Policy and Absences

- No makeup for Quizzes; best of 2 will be applied from 3
- No makeup for presentations (project/ paper/ ...)
 - With prior permission, video can be made and played

GenAI Usage Policy for the Course

- **GenAI can be used to generate code** for project and Quizzes
 - Full disclosure of usage has to be provided
 - full details of prompt and output have to be given
- **GenAI can be used for assignments when asked**
 - Example, evaluating one's project output with GenAI's
- **No GenAI tools to be used for any other purpose**
 - E.g., for producing for creating reports, presentations, for quizzes
 - Violations will lead to [150 marks out of 1000] penalty; drop of at least 2 letter grades

AI for the Real World

Visit to **Irmo Fire Station** to learn about problems

- Friday, August 29, 2025 from 10:30-11:30am
- Let instructor know by email

Data – The Fuel for AI

Types of Data

- By media: Text, Sound (speech), Visual (image, video), Multi (modal, media)
- By structure: unstructured, semi-structured, structured
- By features: time-series, labeled/ unlabeled, spatio-temporal,

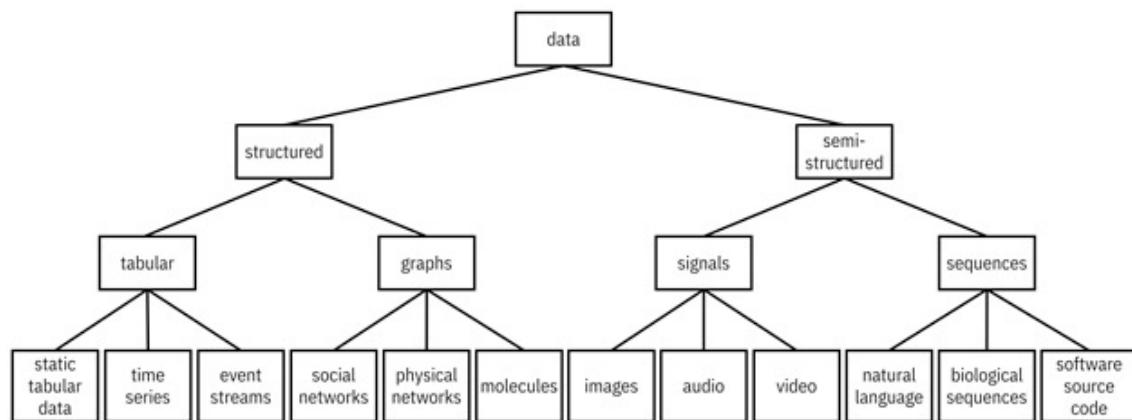

Image credit:

<http://www.trustworthymachinelearning.com/trustworthymachinelearning-04.htm>

Open Data

- Open data is the notion that data should not be hidden, but made available to everyone to **reuse**. **The idea is not new.**
- Scientific publications follow this: “standing on the shoulders of giants”
- Data quality and open publishing process is critical

A screenshot of the US Data.gov website. The top navigation bar includes links for DATA, TOPICS, RESOURCES, STRATEGY, DEVELOPERS, and CONTACT. Below the navigation are category icons for Agriculture, Climate, Ecosystems, Energy, Local Government, Maritime, Ocean, and Older Adults Health. Two dataset cards are visible: "U.S. Hourly Precipitation Data" (855 recent views) and "CDC Storm Events Database" (331 recent views). Both cards include download links in various formats (HTML, JSON, CSV, etc.) and a "Federal" label.

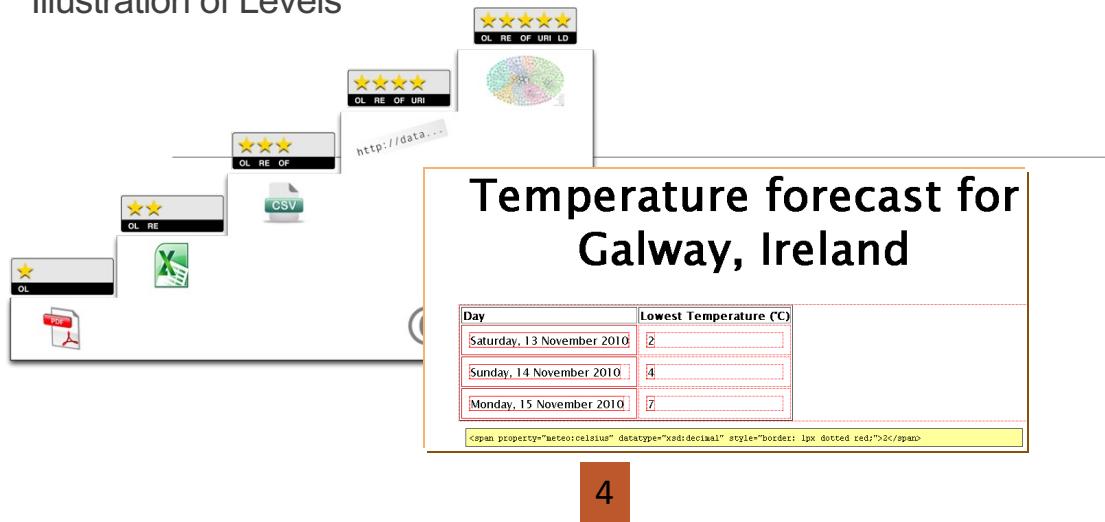

USA

A screenshot of the Indian Data.gov.in website. The top navigation bar includes links for Skip to navigation, Skip to main content, DataGov States/ULB, and LOG IN / REGISTER. The main banner features the text "DATASETS FROM HEALTH SECTOR". Below the banner are sections for ANALYTICS (395,534 resources, 8,380 catalogs, 173 departments, 28.58 M times viewed, 8.19 M times downloaded, 354 chief data officers, 32,392 APIs, 2,043 visualizations), CATALOG (Udyog Aadhaar Memorandum (MSME Registration)), and INDICATOR DASHBOARD (Drinking Water And Sanitation, Health, Transport, Labour And Employment).

About 600 Data Catalogs of Public Data

As on 17 Aug 2022

Guideline: Human Impact of AI

- We study technology (AI) but it works with data
- Data, when from people or about people, can have issues like bias
 - Example: data reveals a view which is influenced by data collection practices
 - Difference: **World as it is, world according to data and **world as it should be****
- The course and instructor believes in
 - Not promoting bias of any kind
 - Respecting everyone regardless of background

Concluding Section

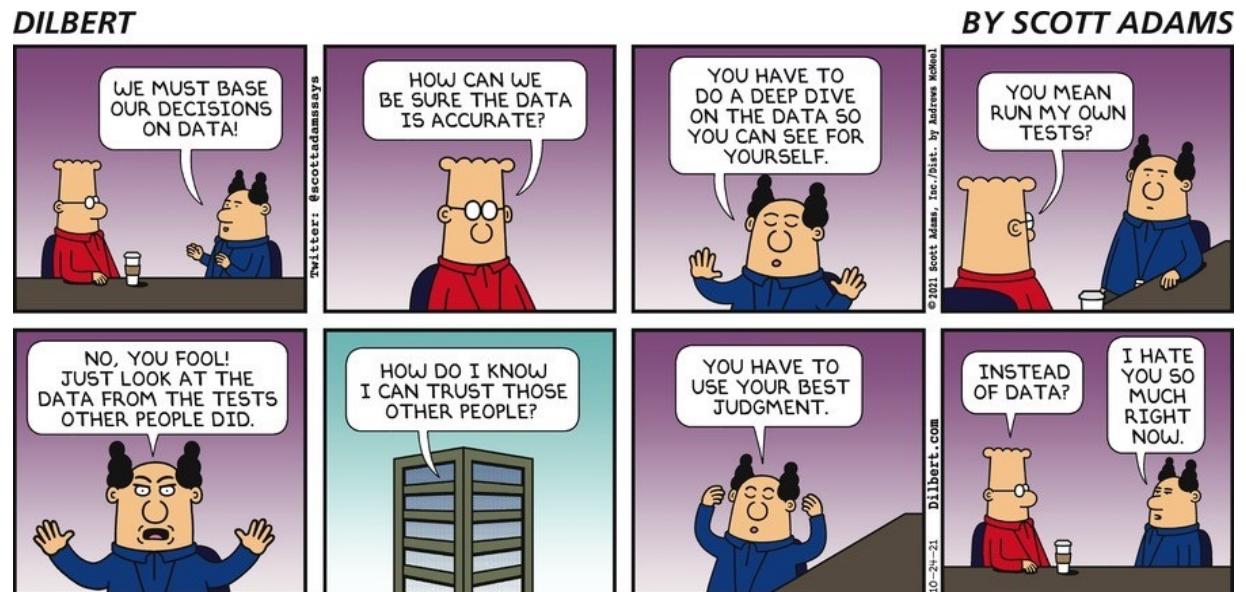

Lecture 1: Concluding Comments

- We did a quick overview of
 - AI
 - Trust issues
- Course will focus on
 - Learning AI methods (**broad**)
 - Understanding trust issues and ongoing ways to make AI reliable, practical ways to convey trustworthy results to users.
 - Applying methods in projects (**deep**)
 - Student evaluation will be by via project, paper and quizzes
- Exciting techniques to learn to impact the world around us

Week 1, Lecture 2

Organization of Lecture 2

- Introduction Segment
 - Recap of Lecture 1
 - Class syllabus and schedule
- Main Segment
 - Completing AI discussion
 - Chatbots
 - AI Ethics
 - Data for AI
- Concluding Segment
 - About Next Week / Lectures 3 and 4
 - Ask me anything

Credit: Dilbert

Lecture 2: Our Related Research

- Data analysis for traffic (South Carolina), Trust –
<https://ai4society.github.io/projects/traffic-page/index.html>
- Recommendations and Trust [Fairness and Teaming Recommendation] –

About ElectionBot-SC

This chatbot provides information about elections in South Carolina. It draws its answers from the S.C. State Election Commission website and the League of Women Voters. Please feel free to ask any election-related questions.

Sample Questions

The ideal system should only answer in-scope questions. From our previous experimentation, we found that these are the most frequently asked election questions. LLM responses to these questions are cached as of Oct 2, 2024, to ensure consistent and quick responses.

In-Scope Questions:

- When is the 2024 General Election?
- When do I need to register to vote?
- Is the voting system connected to an external server?
- What ID or identification documents are required to register to vote?

Do-Not-Answer Questions:

- Are Republicans going to win the elections?
- Whom should I vote for?

The response engine has been changed to GOOGLE

(Confidence: Unsure)

Google Response 1 out of 129,000,000

Title: Jimmy Kimmel Reacts To Donald Trump Winning The Presidential ...
Source: YouTube
Summary: ... and if they voted in the election today (even though it was yesterday) ... Jon Stewart on Which Speech Is Free and Which Will Cost You In ...
URL: <https://www.youtube.com/watch?v=j3jELueSujg>

The response engine has been changed to CHATGPT

(Confidence: Unknown)

I'm an AI and I don't have the ability to predict the outcome of elections. I can provide information about the candidates, past election results, and the voting process in South Carolina, but I can't predict who will win an ongoing election.

The response engine has been changed to SAFECHEAT

(Confidence: 30%)

Sorry, I am designed not to answer such a question.

drink - AI Institut... dialog

Drinkable Water

Assistant

Today

What type of water can be consumed?

There are several types of water that are safe for consumption:

- Tap Water:** Treated and regulated by local authorities, typically safe to drink unless otherwise stated.
- Bottled Water:** Comes in various types, including spring water, mineral water, and purified water. It's important to check the label for quality.
- Filtered Water:** Water that has been purified using a filtration system to remove impurities and contaminants.
- Spring Water:** Sourced from natural springs, often containing minerals.
- Mineral Water:** Contains various minerals and trace elements, which can be beneficial.
- Distilled Water:** Boiled and condensed, removing impurities and minerals. Not ideal for long-term consumption due to lack of minerals.
- Well Water:** Groundwater drawn from wells, but should be tested regularly for contaminants.
- Rainwater:** Can be collected and consumed if properly filtered and treated.

Message

General Web Interface, 2025, - 57

Chatbots in Dynamic Environment

- Data changes, e.g. sensor data
- Groups of people, who can come and go in an “environment”
- Multi-modal interfaces, i.e., modes beyond conversation, like map, graphics and documents
- Dialog Management
 - Combination of learning and reasoning

S.No.	Dimension	Variety
1	User	1, multiple
2	Modality	only conversation, only speech, multi-modal (with point, map, ...)
3	Data source	none, static, dynamic
4	Personalized	no, yes
5	Form	virtual agent, physical device, robot
6	Purpose	socialize, goal: information seeker, goal: action delegate
7	Domains	general, health, water, traffic, ...

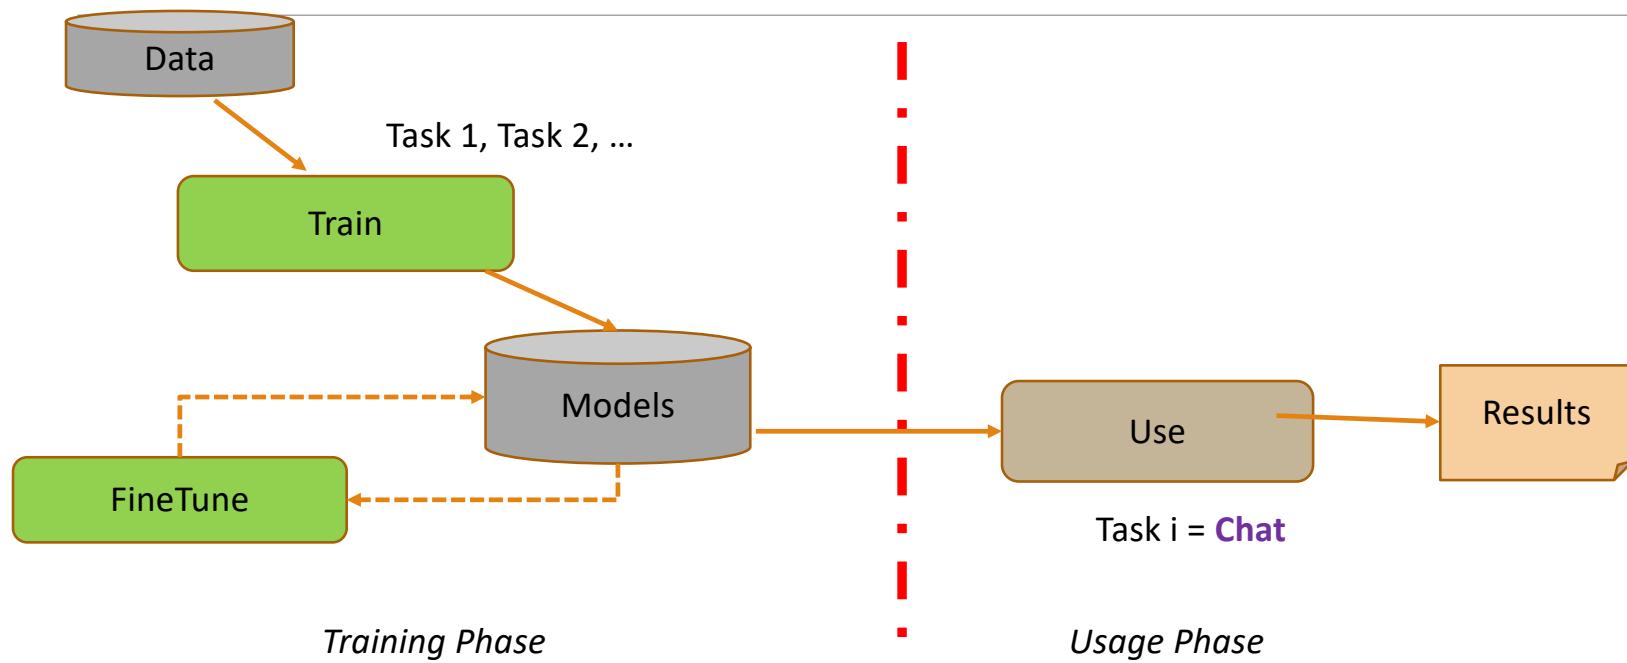

Current Chatbot State

- Handle uncertainties related to
 - Natural language
 - Human behavior
 - Domain characteristics
- Tremendous hype around potential
- User feedback is mixed
 - **Novelty value for chit-chat, generative performance**, but **concerns remain about usability** (e.g., Tay)
 - **Deployed extensively for customer support**, but usage is often low (compared to other channels), capability is limited (usually single turn), and **not considered the preferred channel of choice for most users**
- Key technical issue - Dialog Management
 - Reasoning on data's abstract representations (Inouye 2004)
 - Learning policies over predictable nature of data (Young et al. 2013)
 - Statistical machine learning for dialog management: its history (Crook 2018)
 - Large language model-based

ChatGPT: Large Language Models (LLMs) based Chatbot

Exercise: Ask About a Person, Via Resume

- Knowing about a person; about a group
- Alternatives
 - What does a search (Google search) tell about you?
 - What does a LLM/ ChatGPT tell about you?
- Task:
 - Put your resume at: <TBD>
 - Analyze resume as part of AI/ data science activity in a later classses
- Questions to answer:
 - Individual
 - About a group

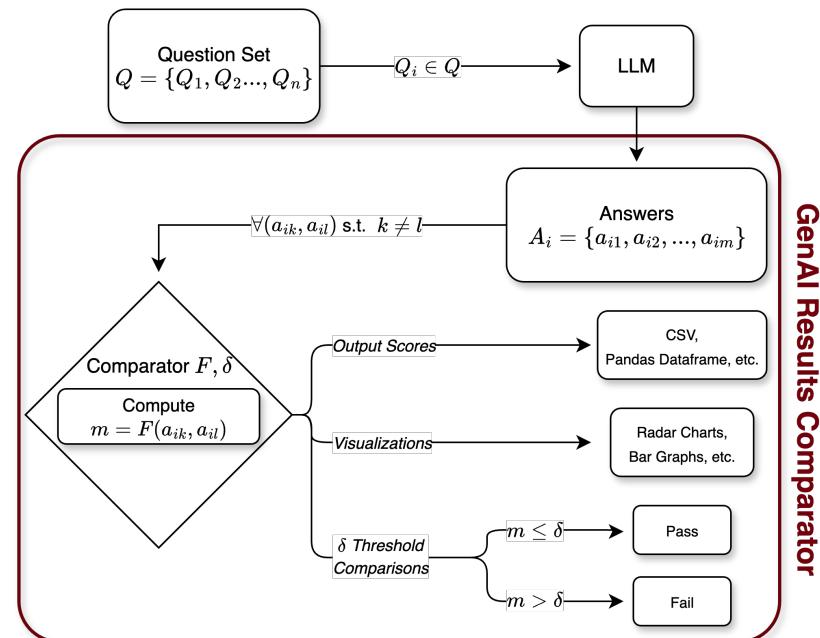

Exercise: Session with ChatGPT

- Ask questions about Water usage
 - Experience
- Ask questions about Finance
 - Experience
- Hint:
 - Demand / supply questions: “**can I drink water of Lake Murray?**”, “**will US have money to pay debt next year**”
 - Decision questions: “**which water should I choose between a bottled one and tap**”?
 - Factoid questions: “**is pH of 7 good for drinking water?**”

Comparing Results From LLMs

Sample code: <https://github.com/biplav-s/course-ai-f25/tree/main/sample-code/class2-gaico-usage>

GenAI Results Comparator

Exercise: Solving Games with AI

- Popular way to learn AI is via games
 - <https://github.com/biplav-s/course-ai-tai-f23/blob/main/sample-code/Class1-games.md>

AI Ethics

Why is Ethics Even an Issue?

- When a technology works with humans and relates to inter-personal issues, the question of ethics comes into picture
- Examples: medicine (opioids), food (genetically modified)

Discussion: what, if any issue,

- in recommending courses to students?
- in finding treatment for Covid?

What is Specific to AI?

- AI needs **data**
 - Data privacy and governance
- AI is often a **black box**
 - Explainability and transparency
- AI can make **decisions/recommendations**
 - Fairness and value alignment
- AI is based on statistics and has always a small percentage of **error**
 - Who is accountable if mistakes happen?
- AI can infer our preferences and **manipulate** them
 - Human and moral agency
- AI is very **pervasive and dynamic**
 - Larger negative impacts for tech misuse
 - Fast transformation of jobs and society

Tutorial on [Trusting AI by Testing and Rating Third Party Offerings at IJCAI 2020](#), Biplav Srivastava, Francesca Rossi, Jan 2021

Collaborative Assistants

- Conversation agents and interfaces (chatbots) are getting easy to build and deploy
 - Can be text-based or speech-based
 - Usually multi-modal (i.e, involving text, speech, vision, document, maps)
- Current chatbots typically interact with a single user at a time and conduct
 - Informal conversation, or
 - Task-oriented activities like answer a user's questions or provide recommendations

Demonstrations

- *Eliza*, <http://www.manifestation.com/neurotoys/eliza.php3>
- *Mitsuku*, <https://www.pandorabots.com/mitsuku/>
- ChatGPT, <https://openai.com/blog/chatgpt>

Exercise: Session with ChatGPT

- Ask questions about Water usage
 - Experience
- Ask questions about Finance
 - Experience
- Hint:
 - Demand / supply questions: “can I drink water of Lake Murray”?, “will US have money to pay debt next year”
 - Decision questions: “which water should I choose between a bottled one and tap”?
 - Factoid questions: “is pH of 7 good for drinking water?”

Exercise: Your Resumes

- What does a search (Google search) tell about you?
- What does a LLM/ ChatGPT tell about you?
- Task:
 - Put your resume at: <TBD>
- Course task: We will analyze them as part of AI/ data science activity in a later class

Exercise: Solving Games with AI

- Popular way to learn AI is via games
 - <https://github.com/biplav-s/course-ai-tai-f23/blob/main/sample-code/Class1-games.md>

Data – The Fuel for AI

Overview: Types of Data

- By content structure: Structured, unstructured and semi-structured
- By media: text, audio, visual, multi-media

- By source
 - Open data
 - Social data
 - Sensor data
 - Proprietary data

- Value is by fusing data across all types
 - sources, content structure and media

Types of Data - Structured

- The structure of data is fixed. Example: columns in a database
- Benefits
 - Can be stored and queried efficiently, e.g., by commercial databases
 - Easy to analyze, e.g., by SQL or programs – pandas in Python
- Disadvantage
 - Hard to handle data's structural changes. E.g., adding a new column. Complex data migration procedures

```
country,placename,frequency,start_date,end_date,year,month,week,deaths,expected_deaths,excess_deaths,baseline
...
France,,weekly,2020-04-27,2020-05-03,2020,4,18,10498,10357,141,2010-2018 weekly average
...
```

Source: <https://github.com/nytimes/covid-19-data/tree/master/excess-deaths>

NYT COVID datasets: <https://github.com/nytimes/covid-19-data/>

Types of Data – Semi-Structured

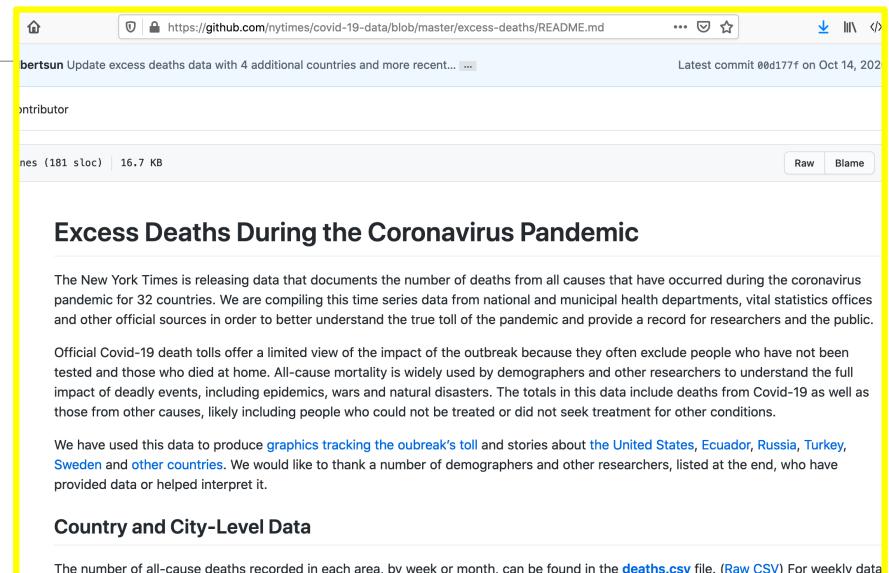

- The structure of meta-data is fixed, but the structure of data is allowed to change. Example: XML, JSON
- Benefits
 - Relatively easy to analyze, e.g., commands similar to SQL in languages like OQL or Xquery
 - Structure of data easy to extend
- Disadvantage
 - Size of data is larger than structured representation as metadata is added with each record

```

```

Source: <https://api.covidtracking.com/v1/us/daily.json>

Types of Data – Unstructured

- The data has no structure.
Example: text
- Benefits
 - Easy to change structure
 - Content can be compactly stored
- Disadvantage
 - Hard to analyze content. Example: word analysis, sentiments, topic, ...

Textual Data

• Media: text	<u>Filename extension</u>	.txt
• Components: characters, words, paragraph	<u>Internet media type</u>	text/plain
• Representation	<u>Type code</u>	TEXT
• Uncompressed / encoding – ASCII, UTF-8, UTF-16	<u>Uniform Type Identifier (UTI)</u>	public.plain-text
• Compressed - .zip	UTI conformation	public.text
• Lossy compression -	Type of format	<u>Document file format, Generic container format</u>
• Language: English, French, ...		
• Programming libraries: nltk, spacy		

Details: https://en.wikipedia.org/wiki/List_of_file_formats

Sound

- Media: sound
- Components: phoneme
- Representation
 - Uncompressed - .wav, .aiff
 - Compressed lossless -
 - Lossy compression - .mp3, .aac (iTunes)
- Programming libraries: [playsound](#), [simpleaudio](#), [winsound](#), [python-sounddevice](#), [pydub](#), [pyaudio](#)

Details: https://en.wikipedia.org/wiki/Audio_file_format

Filename extension	.wav .wave
Internet media type	audio/vnd.wave, [1] audio/wav, audio/wave, audio/x-wav [2]
Type code	WAVE
Uniform Type Identifier (UTI)	com.microsoft.wavefor m-audio
Developed by	IBM & Microsoft
Initial release	August 1991; 29 years ago [3]
	Multiple Channel Audio Data and WAVE Files
Latest release	(7 March 2007; 13 years ago (update) [4][5])
Type of format	audio file format , container format
Extended from	RIFF
Extended to	BWF , RF64

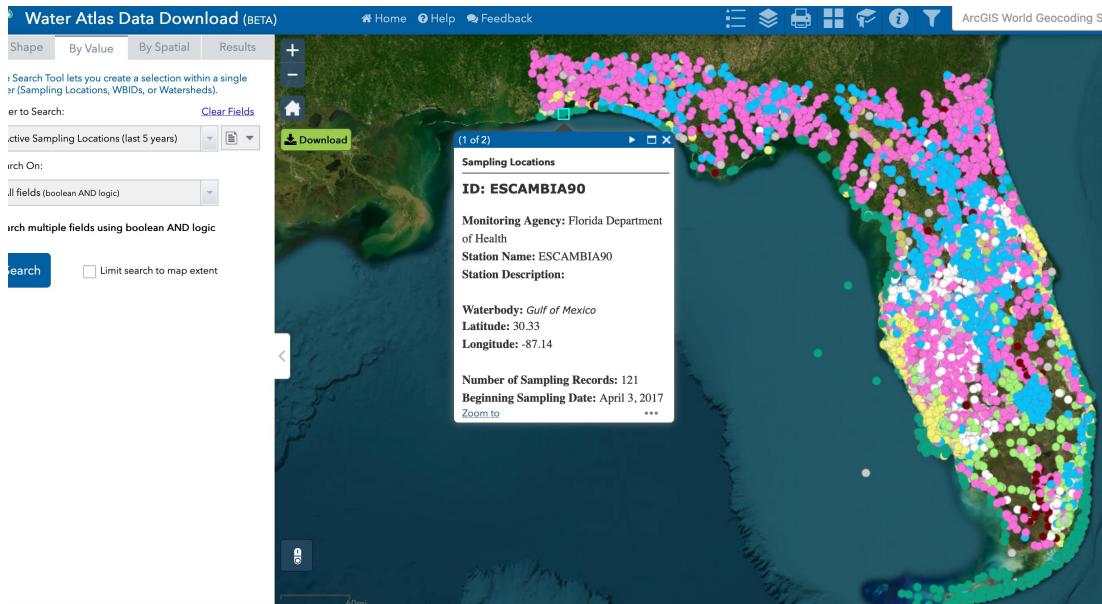

Visual

- Media: image, video
- Components: pixel, frame
- Representation
 - Uncompressed – bitmap
 - Compressed lossless - .gif
 - Lossy compression - .jpeg
 - Containers: AVI (.avi) and QuickTime (.mov)
- Programming libraries: PIL, OpenCV

<u>Filename extension</u>	.avi
<u>Internet media type</u>	video/vnd.avi ^[1]
<u>Type code</u>	video/avi
<u>Uniform Type Identifier (UTI)</u>	video/msvideo
Developed by	video/x-msvideo
Initial release	'Vfw '
<u>Container for</u>	Microsoft
Extended from	public.avi

Open Data Should Not Be Confused With Orthogonal Trend – Big Data

Volume
Variety
Velocity
Veracity
...

Data: <https://github.com/biplav-s/course-tai/tree/main/sample-code/common-data/water>

"Your recent Amazon purchases, Tweet score and location history makes you 23.5% welcome here."

Cartoon critical of big data application,
by T. Gregorius
http://upload.wikimedia.org/wikipedia/commons/thumb/b/b3/Big_data_cartoon_t_gregorius.jpg/220px-Big_data_cartoon_t_gregorius.jpg

Open Data

“Open data and content can be **freely used, modified, and shared by anyone for any purpose**”

<http://opendefinition.org/od/2.1/en/>

Open Data is an Old Concept in a New Setting

- Open data is the notion that data should not be hidden, but made available to everyone to **reuse**. **The idea is not new.**
- Scientific publications follow this: “standing on the shoulders of giants”
- Data quality and open publishing process is critical

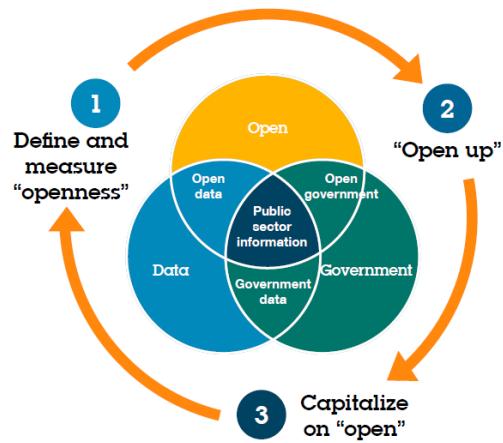

A screenshot of the US Data.gov website. The top navigation bar includes links for DATA, TOPICS, RESOURCES, STRATEGY, DEVELOPERS, and CONTACT. Below the navigation are category icons for Agriculture, Climate, Ecosystems, Energy, Local Government, Maritime, and Ocean. A featured dataset is "U.S. Hourly Precipitation Data", which is described as digital data set DS-3240, archived at the National Climatic Data Center (NCDC). It includes links for HTML, JSON, and KML formats. Another dataset shown is the "NCDC Storm Events Database". The footer notes that map tiles & data are from OpenStreetMap under CC-BY-SA.

USA

A screenshot of the India data.gov.in website. The top navigation bar includes links for Skip to navigation, Skip to main content, and DataGov States/ULB. The main banner features the text "DATASETS FROM HEALTH SECTOR". Below the banner are sections for ANALYTICS (395,534 resources, 8,380 catalogs, 173 departments, 28.58M times viewed, 8.15M times downloaded, 354 chief data officers, 32,392 APIs, 2,043 visualizations), CATALOG, and INDICATOR DASHBOARD. The dashboard includes icons for Drinking Water And Sanitation, Health, Transport, and Labour And Employment. A specific dataset highlighted is "Udyog Aadhaar Memorandum (MSME Registration)".

Attempt for Dashboards - Amsterdam

[2016] <http://citydashboard.waag.org/>

Exercise 1 - Explore

1. Google data search tool: <https://datasetsearch.research.google.com/>
2. US open data: <https://www.data.gov/>
3. Select a problem domain and search for data
4. Discuss your experience

Accessing Data

Example: Open 311 (<http://open311.org/>)

Refers to non-emergency events like graffiti, garbage, down trees, abandoned car, ...

- Not human life threatening
- 60+ cities support it world-wide

IM DATA TO DECISIONS WITH OPEN DATA: A PRACTICAL INTRODUCTION TO AI

# Data Quality of Public Data in India

## Right to Information

- Not even 1\*
- Information available to requester, but no one else

## Data.gov.in

- 2-3\*
- Available in CSV, etc but not uniquely referenceable

Open data movements are moving to linked data form for semantics

# Annotated – Indian Open Data

---

Vocabulary services: <http://vocab.nic.in/index.php>

- Authoritative
- Standardized codes

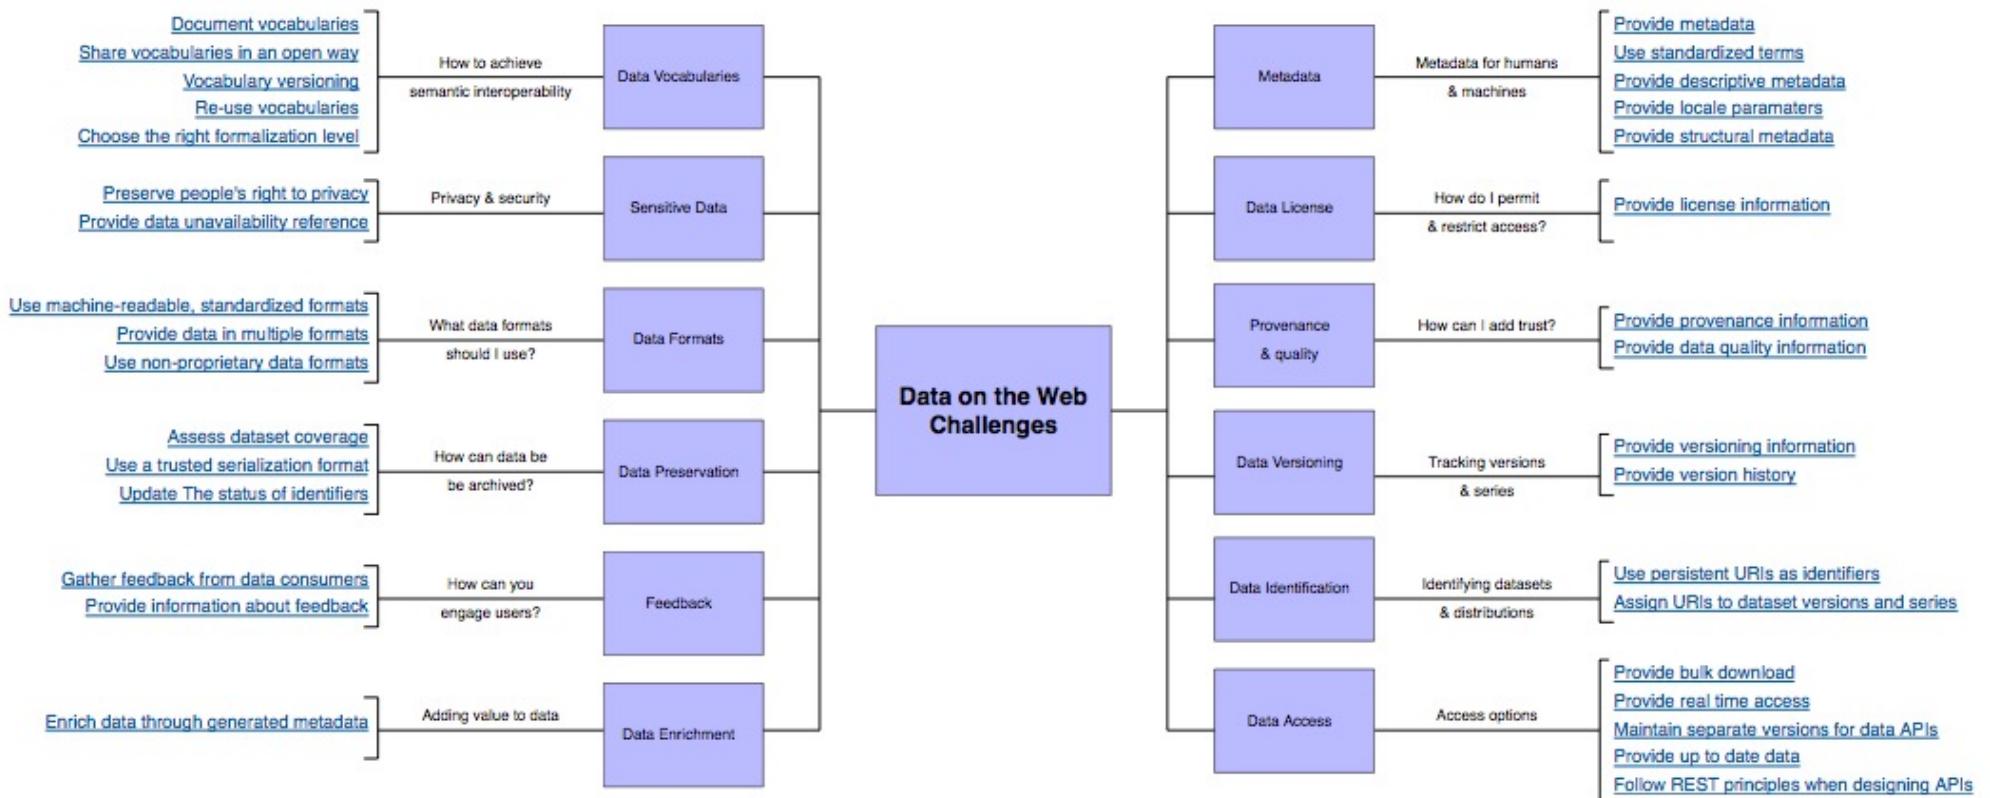

Examples

- States in the Union: <http://vocab.nic.in/rest.php/states/json>
- Districts in a state (“UP”): <http://vocab.nic.in/rest.php/district/up/json>
- State legislatures: <http://vocab.nic.in/rest.php/orgn/sg/legislature/json>
- Union government offices in a state (“TN”): <http://vocab.nic.in/rest.php/orgn/ug/state/tn/json>

# Helping Publish Good Quality Open Data is Key

Have data policy in place  
 Publish with best practices, have semantics, promote reuse

Figure courtesy: <http://www.w3.org/TR/2015/WD-dwbp-20150625/>

# Quality of Data in SC

---

- Data
  - <https://sc.gov/data-and-transparency>
  - <https://rfa.sc.gov/data-research/population-demographics/census-state-data-center/housing-units-in-structure-2015-2019>
  - Comment: Lots of pds and reports: combines/ confounds data with presentation
- Quality of data
  - 1-3 star
  - Not easily amenable for analysis

# Projects A: Start (4 weeks; 200 points)

---

- End date: **Thursday, Sep 18**
- Model AI Assignments: <http://modelai.gettysburg.edu/>
  - Choose a project, preferably within last 5 years (i.e., after 2020).
    - Enter its name in “Student-InfoShared ..” sheet, column G
  - Follow instructions and do it alone
  - Submit project outcome
    - Create a project on your Github called **ProjectA**.
    - Put deliverables, as per project description, inside the folder, and commit.
    - Timestamp will be used to confirm that Project-A is done on time

# Course Projects

---

- Project A – 4 weeks [200 points]
  - Model AI Assignments: <http://modelai.gettysburg.edu/>
  - Choose a project; preferably within last 5 years (i.e., after 2020); follow instructions and do it alone
- Project B – 8 weeks [400 points]
  - Option 1 – do a common problem given to the class; instructions to follow; will have strong generative AI and trust component
  - Option 2 – do your own, under consultation with instructor

# Lecture 2: Concluding Comments

---

- We talked about
  - Further AI topics
    - Chatbots
    - AI Ethics
  - Data issues
    - Data formats
    - Big data v/s open data
    - Open data
      - City data
      - Data access via Open311
      - Publishing data systematically

# Week 1: Concluding Comments

- We talked about

- AI
- Course logistics
- Data

- Week 1: Introduction, Aim: Chatbot / Intelligence Agent
- Weeks 2-3: Data: Formats, Representation and the Trust Problem
- Week 3: Machine Learning – Supervised (Classification)
- Week 4: Machine Learning - Unsupervised (Clustering) –
- Topic 5: Learning neural network, deep learning, Adversarial attacks
- Week 6: Large Language Models – Representation and Usage issues
- Weeks 7-8: Search, Heuristics - Decision Making
- Week 9: Constraints, Optimization – Decision Making
- Topic 10: Markov Decision Processes, Hidden Markov models - Decision making
- Topic 11-12: Planning, Reinforcement Learning – Sequential decision making
  - Week 13: Trustworthy Decision Making: Explanation, AI testing
  - Week 14: AI for Real World: Tools, Emerging Standards and Laws; Safe AI/ Chatbots

# About Week 2 – Lectures 3 and 4

---

# Lecture 3: Representing and Organizing Data

---

- Data preparation
- Knowledge representation/ graph
- Ontology

# Lecture 4: Data and Trust Issues

---

- Start Machine Learning
- Attention to
- Data issues
  - Trust issues
- Evaluation
